Atmospheric Chemistry Experiment

*ACE-FTS Spectroscopy – Version 3.5*

**Document Number: ACE-SOC-0027**

**Issue:** 1 **Revision:** A

**Issue Date:** January 22, 2016

	Function	Name	Signature	Date
Prepared by:	Operat. Specialist	Ryan Hughes		
Checked by:	Project Scientist	Chris Boone		
Approved by:	Mission Scientist	Peter Bernath		

## DOCUMENT CHANGE RECORD

<b>Issue</b>	<b>Rev.</b>	<b>Date</b>	<b>Change Detail</b>
1	-	2014-Aug-16	First Issue of Document
	A	2016-Jan-22	Updated Microwindow and interferer tables for HCFC-22

## TABLE OF CONTENTS

1. Introduction .....	1
2. Pressure and Temperature Microwindows.....	3
3. Microwindows for all Routine Version 3.0 Species .....	5
4. Microwindows for Subsidiary Isotopologues .....	41
5. Line Parameters.....	69

## LIST OF TABLES

Table 1: Signal-to-Noise Weighting of Wavenumber Ranges .....	2
Table 2: Microwindow list for Pressure/Temperature.....	3
Table 3: Microwindow list for O <sub>3</sub> .....	5
Table 4: Interfering Molecule(s) for O <sub>3</sub> .....	6
Table 5: Microwindow list for H <sub>2</sub> O .....	7

## 1. Introduction

Microwave sets used for the ACE-FTS version 3.5 volume mixing ratio (VMR) retrievals are presented. Note that these microwave sets are identical to those employed for ACE-FTS version 3.0 retrievals except for two molecules: C<sub>2</sub>H<sub>6</sub> and HCFC-22. For C<sub>2</sub>H<sub>6</sub>, the upper altitude limits for two microwave windows were lowered from 22 to 20 km. For HCFC-22, two broad microwave windows were employed in version 3.0 retrievals. One of those microwave windows was removed for version 3.5, and the set of interferers was reduced because we dropped all interferers that had no significant spectral contribution to the remaining HCFC-22 microwave window.

Also reported for these microwave sets are the molecules explicitly included as interferers in the retrieval of the target molecule. The VMR profiles for these interferences are fitted simultaneously with the target VMR profile. Note that the retrieval results for interferers are not stored; only the results for the target molecule/isotopologue are saved.

For some molecules, additional interferences exist that are not explicitly retrieved, in which case the VMR profile for the interferers are fixed to the results of previous retrievals. Different isotopologues of a given molecule are assumed to have different VMR profiles. Thus, when more than one isotopologue of a molecule serves as an interferer, each isotopologue gets its own retrieved VMR profile.

Some molecules (such as C<sub>2</sub>H<sub>6</sub>) have altitude limits that vary with latitude. For these molecules, the altitude limits are presented as a range (e.g., 7-10). The first value in the range corresponds to the altitude limit at the poles, while the second value corresponds to the altitude limit at the equator. The variation with latitude typically goes as the square of the sine of the latitude.

For HCl and HF, upper altitude limits for most microwave windows are given in terms of atmospheric density, providing a variation with both latitude and season.

The CO<sub>2</sub> microwave set employed for pressure/temperature retrievals is the same set used to retrieve the CO<sub>2</sub> VMR profile reported in the version 3.0 results.

Some microwave sets include windows that do not contain information on the target molecule, but instead are meant to improve the results for the interferences, particularly for cases where the spectral features from the interferences in the main microwave set are relatively weak.

In the tables describing interferers, an isotopologue number of 0 is used to indicate “all isotopologues of the given molecule” but typically means only the main isotopologue of the molecule is interfering in the microwave set. A number greater than 0 indicates a particular isotopologue of the molecule.

The weighting factor used for the least squares process varies with wavenumber because the signal-to-noise ratio (SNR) in the spectrum varies with wavenumber. The table below details the assumed SNR used to calculate the fitting weights (the weighting goes as the square of the SNR). Note that the actual SNR performance of the instrument is typically underestimated by these effective values. The purpose of these values is to apply a relative fitting weight for microwave windows from different wavenumber ranges for a given molecule.

**Table 1: Signal-to-Noise Weighting of Wavenumber Ranges**

<b>Range (cm<sup>-1</sup>)</b>	<b>Effective SNR</b>
< 800	50
800 – 900	75
900 – 1000	100
1000 – 1850	150
1850 – 2500	200
2500 – 2750	125
2750 – 3900	100
3900 – 4100	70
4100 – 4200	50
> 4200	35

## 2. Pressure and Temperature Microwindows
